FOREWORD

The purpose of this manual is to provide the military Services with a compendium of the phenomena manifested by the detonation of nuclear weapons and the effects thereof in terms of damage to targets of military interest.

This edition of *Capabilities of Atomic Weapons* represents the continuing effort by the Armed Forces Special Weapons Project to make available the progressively improved data resulting from field testing, scaled tests, laboratory and theoretical analyses.

The manual is intended to serve as a basis for the preparation of operational manuals, not as an operational or employment manual of itself. Every effort has been made to include the best available data which will assist the using Services in meeting their particular operational requirements. As additional or better data becomes available it will be incorporated herein.

EDWARD N. PARKER

Rear Admiral, USN

Chief, Armed Forces Special Weapons Project
